PROFESSIONAL SUMMARY

IT Support Engineer with 10+ years of experience in enterprise environments, specializing in SQL (Oracle PL/SQL and SQL Server T-SQL), data loading and migration, system integrations and L2 production support. Supported Nestlé/Nespresso in a global 24/7 operation through IBM and delivered ERP, BI and integration work for Aeroméxico, Grupo Vidanta and Alsea through Condor Consulting. Working remotely since 2019. Currently completing a full stack web development bootcamp (TypeScript, React, Node.js, MongoDB) and studying AWS fundamentals.

CORE SKILLS

Support & Operations: L2 application support, incident and problem management, root-cause analysis, ITIL, SLA/SLO, global 24/7 operations
Tools: Jira, ServiceNow, Confluence, Grafana (dashboard monitoring), Git
Databases: Oracle PL/SQL, Microsoft SQL Server (T-SQL), stored procedures, packages, views, functions, complex SQL queries
Data & Integration: Data loading, validation and migration (SQL*Loader, UTL_FILE); SAP–Oracle integration; Pentaho Data Integration (introductory)
Enterprise Systems: ERP and supply chain applications; Oracle E-Business Suite (R11/R12)
BI & Reporting: OBIEE, BI Publisher
Web & Cloud (in training): JavaScript, TypeScript, React, Node.js, Express, MongoDB, REST APIs; Microsoft Azure Fundamentals; AWS (self-study); Python (fundamentals)
Languages: Spanish (native), English (B2, upper-intermediate)

PROFESSIONAL EXPERIENCE

Support Engineer — IBM (Client: Nestlé / Nespresso) *Apr 2021 – Nov 2025*

- Took part in the 2021 service transition from the incumbent provider (seven months of knowledge transfer and shadowing alongside teams in India, Romania and Mexico), then assumed L2 support of Supply Chain systems in a global 24/7 follow-the-sun operation.
- Performed L2 incident analysis on Nespresso's PL/SQL-based custom ERP (Nesoft): replicated issues from user screenshots and videos, traced procedure call chains to locate faults, used SQL queries daily to check order and batch status, and escalated documented findings to L3.
- Traced a recurring purchase-order rejection across three systems (Nesoft, Nesoa, SAP) by inspecting integration payloads and found that new SAP products were missing required fields; applied a workaround and, with the SAP team, implemented validation and a user alert, cutting resolution time from typically 2–3 days to a few hours.
- Documented the most frequent incidents and worked with Problem Management to remove their root causes, reducing ticket volume; after the stabilization period in early 2022, the team met the client's SLA target of resolving at least 90% of tickets within five days.
- Triaged post-release incidents across four release windows per year (January, April, July, October), identifying release-related defects and documenting them for L3 fixes.
- Executed authorized data corrections through controlled interfaces built by L3, for example closing order batches left unprocessed after a communication outage so distribution could continue.
- Interpreted real-time Grafana dashboards (orders processed per market) to tell apart ERP processing failures, e-commerce outages and stalled orders; informally supported junior L1 analysts and covered weekend on-call.

Developer Analyst (PL/SQL & T-SQL) — Condor Consulting *Mar 2013 – Mar 2021 (remote from 2019)*

- **Aeropuertos del Sureste (2021, engaged through Deloitte):** Contributed to an Oracle EBS upgrade, installing objects in DEV and TEST environments and supporting the functional team during testing.
- **Grupo Azor (2020):** Contributed to an Oracle EBS migration, extracting data from the legacy environment and loading it into the new one (receivables, fixed assets, inventory and purchasing), from requirements analysis to testing with the functional team.
- **Aeroméxico (2019):** Contributed to a SAP–Oracle integration by modeling control tables and building import, load and export processes from SAP to Oracle EBS (PL/SQL, UTL_FILE, HR APIs), and supported validation of developments remediated for a new legal entity.
- **Grupo Vidanta (2017–2019):** Re-engaged on Condor's recommendation, with approval from the client's BI management, to take over BI Publisher report development; gathered requirements with sales, collections, reservations and income teams and delivered reports in OBIEE and BI Publisher over SQL Server data; documented applications under ITIL; supported the early build of a data warehouse with Pentaho Data Integration (extract and load jobs into tables designed by the BI lead).

- **Alsea (2016–2017):** Remediated custom programs for the Oracle-led EBS R11-to-R12 migration, which unified the Mexico, Colombia, Chile and Argentina instances, including my own earlier developments; contributed views and PL/SQL procedures to a supplier appointment system; worked with a remote project lead on distributed teams.
- **Grupo Vidanta (2014–2016):** Developed T-SQL stored procedures and customizations during the implementation of TimeShareWare, a timeshare management system (contract printing, inventory allocation, electronic billing), and loaded business configuration data for the national and international markets ahead of the 2015 go-live; an initial one-month assignment extended to about 19 months.
- **Alsea (2014):** Over several months, built PL/SQL data-load interfaces that let business users upload CSV files of suppliers, items and price lists into Oracle ERP across Mexico, Chile and Colombia, with templates, error handling and respect for cross-table dependencies (foreign keys and lookups); then selected as the only external consultant on a five-person team supporting the go-live of a new distribution center in Colombia, resolving load errors in real time within a fixed 10-day window.
- **Querétaro State Government (2013–2014):** Delivered EBS customizations (bank-transfer formats, fixed-asset tags, bulk supplier load) end to end, from functional and technical specifications to delivery documentation and installation scripts for deployment.

LEADERSHIP & INDEPENDENT PROJECTS

President (Volunteer) — Residential Community Association *Mar 2025 – Present*

- Elected to lead governance, budget oversight and conflict resolution, applying stakeholder management and decision-making without formal management authority.
- Directed data loading and validation for a new access-control system covering the main entrance and clubhouse.
- Built a Telegram chatbot integrated with the Claude API to answer resident inquiries (WhatsApp Business integration planned); building a community website with HTML5, CSS3 and JavaScript.

EDUCATION & CERTIFICATIONS

- **Bachelor of Computer Systems Engineering** — Tecnológico de Estudios Superiores de Coacalco (TESCO), Mexico. Coursework 2008–2013; degree conferred 2016.
- **Full Stack Web Development Bootcamp** — TripleTen, in progress (Feb 2026–present): HTML5, CSS3, JavaScript, TypeScript, React, Node.js, Express, MongoDB, REST APIs, authentication, unit testing with Jest, deployment on Vercel and MongoDB Atlas.
- **Microsoft Azure Fundamentals (AZ-900)** — December 2022
- **ITIL Foundation** — IT Service Management
- **Python Programming Course** — Udemy, February 2026 (25.5 hours)
- **Introductory AWS Cloud Course** — in progress (started September 2026)
